Software Development Life cycle :- it is a step by step process used by software Industry to design, develope & test software

- By Using this Software Development life cycle companys are designing their own Models.

Waterfall Model

This is old and Traditional model. It is an Initial model of Software Industry.

- In this waterfall model each and every activity recorded in the documentation SRS. Once documentation is created System design will be started based on SRS Documentation.
- Based on Design develop the Implementation and Development. After completing this testing phase is started In this phase we test the software then Deploy the s/w in to the customers environment than start using the s/w is called maintenance.
- Quality of the product and Requirement changes are not allowed.

Agile :-

Agile is a Project Management and Software development approach that aims to be more effective

1. It focuses on delivering smaller pieces of work quality regularly instead of one big launch
2. This allows teams to adapt the changes quickly and provide customer value faster.

- Agile methodologies are iterative and incremental, which means it's known for breaking a project into smaller parts and adjusting to changing requirements.
  1. They Prioritize flexibility, collaboration and customer satisfaction
  2. Major companies like facebook, Google and Amazon use Agile because of its adaptability and customer focused Approach.
- Life Cycle of Agile :-
